

**IN THE CLAIMS ATTACHED TO THE
INTERNATIONAL PRELIMINARY EXAMINATION REPORT:**

Please rewrite claims 1-10 as shown below in the detailed listing of all claims which are, or were, in this application:

1. (Currently amended) A plunger intended for an inserter for an intrauterine device with a T-body, ~~which~~ wherein the plunger has
 - a first end and a second end, and
 - a first dimension, which is the longitudinal direction of the plunger, and
 - the length of which plunger in its longitudinal direction is substantially larger than the diameter of the cross-section perpendicular to the longitudinal direction, and
 - the cross-section of which plunger is substantially circular, and
 - through which plunger an opening has been arranged in its longitudinal direction so that the longitudinal axis of the opening is substantially the same as the longitudinal axis of the plunger, wherein the opening at the first end of the plunger is arranged to expand in a direction perpendicular to the direction of the longitudinal axis to form a tip portion, so that the tip portion turns at least 35° in relation to a first plane in parallel with the longitudinal axis, ~~characterised in that~~ wherein said at least

one surface turns also at least 35° in relation to a plane that is perpendicular to said direction of the longitudinal axis, along at least a portion of the length of the tip portion.

2. (Currently amended) A plunger according to claim 1, ~~characterised in that~~ wherein said at least one surface turns 90° in relation to the first plane and 90° in relation to the plane at an angle.

3. (Currently amended) A plunger according to ~~any previous claim,~~ ~~characterised in that~~ claim 1, wherein the tip portion has two surfaces.

4. (Currently amended) A plunger according to claim 3, ~~characterised in that~~ wherein said two surfaces form a surface pair.

5. (Currently amended) A plunger according to claim 4, ~~characterised in that~~ wherein the surfaces forming the surface pair of said surface pair are mirror images of each other in relation to

a second plane in parallel with the longitudinal axis, whereby this second plane is perpendicular to said first plane.

6. (Currently amended) A plunger according to ~~any previous claim,~~
~~characterised in that~~ claim 1, wherein it has in addition at least one surface, which is substantially in parallel with said first plane.

7. (Currently amended) A plunger according to ~~any previous claim,~~
~~characterised in that~~ claim 1, wherein the tip portion has four surfaces.

8. (Currently amended) A plunger according to claim 7,
~~characterised in that~~ wherein said four surfaces form two surface pairs, which are mirror images of each other in relation to said first plane in parallel with the longitudinal axis.

9. (Currently amended) A plunger according to claim 8,
~~characterised in that~~ wherein in at least one surface pair the surfaces forming the surface pair are mirror images of each other in relation to a second plane in parallel with the longitudinal

axis, whereby the second plane is perpendicular to said first plane.

10. (Currently amended) A plunger according to ~~claim 8 or 9,~~
~~characterised in that~~ claim 8, wherein said surface pairs are
connected with each other.
